

AppDynamics Performance Monitoring for SAP® Solutions

Optimize performance with code-level visibility, root cause analysis, and program-impact awareness

For most enterprises, SAP® applications are mission critical. Yet, SAP performance management is still notoriously complicated and unreliable. Until now.

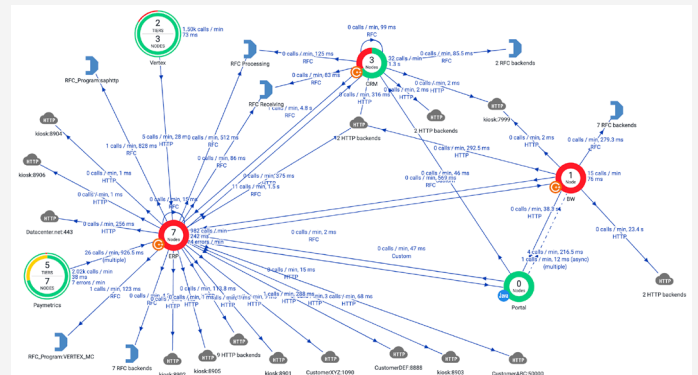

With AppDynamics Performance Monitoring for SAP Solutions, you can finally ensure holistic visibility to help customers drive better uptime & performance of SAP applications using ABAP — including ERP, ECC, S4/ HANA, CRM, BW, PI/PO, and more. As the **only** solution offering root cause analysis with ABAP code-level visibility, our **SAP-certified integration with SAP S/4HANA and SAP® NetWeaver** simplifies everyday tasks and helps to keep track of even the most complex SAP landscapes.

When SAP performance suffers, your business suffers.

“...just one minute of downtime in a data center or critical application costs the average enterprise almost \$10,000 in 2019—and that figure has steadily increased over the past five years.”

ASUG, “Modernizing SAP: The Secret to Avoiding the Startling Cost of Unplanned Downtime,” August 2021

Application Flow Map

Application Flow Map showing both SAP and Java services. Flow Maps are automatically built-in real time based on live traffic.

Order Management Dashboard

Maximize Uptime

Detect, isolate, and troubleshoot SAP performance issues with ease.

- **Low-overhead** agent quickly detects performance issues and pinpoints the root cause to a single line of ABAP code or database query
- **Code-level transaction snapshots** capture diagnostic information when performance is impacted
- Track the **entire stack** through SAP and Non-SAP systems
- Monitoring the most **critical areas of SAP** which include IDocs, DB Locks, Work Processes, and RFCs

Improve Visibility

Gain insights into the performance of the entire SAP ecosystem.

- Flow Maps based on **live traffic** visualize all SAP dependencies in on-premises, cloud, and hybrid environments
- **Intelligent alerts** notify IT teams when SAP performance deviates from baseline
- Understand **company impact** in real-time with program analytics
- Day one value with **~30 OOTB dashboards** and **250+ metrics/ KPIs** to choose from

Drive Excellence

Seamlessly migrate legacy SAP applications to ensure the best user experience.

- Application Flow Maps with automatic **business transaction** detection help ensure a smooth transition to S/4HANA®
- **Landscape visualization** of all connections to SAP environments to reduce risks during cloud migration and upgrades
- **Config Change** monitoring
- Real-time views into **performance metrics** for application and program owners

Future-proof your organization with AppDynamics and Cisco

Mastering the herculean feat of migrating to S/4 HANA, hybrid, or full-cloud landscapes is easier than ever as a SAP platinum partner. Together, we offer unparalleled resources to meet your organization's needs as you scale, focusing on supporting your growth and profitability as SAP becomes "the cloud company powered by SAP HANA®." Plus, we offer the broadest version support of any APM vendor, from SAP 7.0 onward.
